Office Action Summary

Art Unit:

DETAILED ACTION

Election/Restriction

1. Claims 1-16 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b) as being drawn to a non-elected invention. Election was made **without** traverse in Paper No. 9.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
3. The abstract of the disclosure is objected to because it is not directed to the invention that is now claimed. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit:

5. Claims 17, 19 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Landt and Gutshall.

Landt and Gutshall both disclose a self locking bolt structure that includes a head and a threaded shank wherein the head includes locking projections provided on the undersurface or bearing surface of the head. In both references the projections are placed at regular intervals around the head.

6. Claims 17 and 19 are rejected under 35 U.S.C. 102(b) as being anticipated by McMurray and Barth.

McMurray and Barth also disclose bolt structures with locking projections provided on the undersurface of the bolt head. In both of these references the projections are provided in a peripheral region of the head, rather than extending to the bolt shank (as disclosed in the above applied references to Landt and Gutshall).

7. Claims 18, 20 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Sigmund.

Sigmund discloses a self locking bolt structure that includes a head and a threaded shank wherein the head includes locking recesses provided on the undersurface of the head as claimed. The recesses are placed at regular intervals around the head and extend to the shank of the bolt.

8. Claims 18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Tabor.

Art Unit:

Tabor discloses a self locking bolt with locking recesses provided on the undersurface of the bolt head as claimed. In Tabor the recesses are provided in the peripheral region of the head, rather than extending to the shank of the bolt.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references to Melone, Knohl and Albris disclose related self locking bolt structures and are cited to further show the state of the art.

10. The following are suggested formats for either a Certificate of Mailing or Certificate of Transmission under 37 CFR 1.8(a). The certification may be included with all correspondence concerning this application or proceeding to establish a date of mailing or transmission under 37 CFR 1.8(a). Proper use of this procedure will result in such communication being considered as timely if the established date is within the required period for reply. The Certificate should be signed by the individual actually depositing or transmitting the correspondence or by an individual who, upon information and belief, expects the correspondence to be mailed or transmitted in the normal course of business by another no later than the date indicated.

Notice Regarding Treatment of Irradiated Correspondence

The following papers have not been made part of the permanent records of the United States Patent and Trademark Office (Office) for this application (37 CFR 1.52(a)) because of damage from the United States Postal Service irradiation process:

Mailroom Stamp Date

1/18/02

Certificate of Mailing Date

10/31/01

The above-identified papers, however, were not so damaged as to preclude the USPTO from making a legible copy of such papers. Therefore, the Office has made a copy of these papers, substituted them for the originals in the file, and stamped that copy:

COPY OF PAPERS ORIGINALLY FILED

If applicant wants to review the accuracy of the Office's copy of such papers, applicant may either inspect the application (37 CFR 1.14(d)) or may request a copy of the Office's records of such papers (*i.e.*, a copy of the copy made by the Office) from the Office of Public Records for the fee specified in 37 CFR 1.19(b)(4). Please do not call the Technology Center's Customer Service Center to inquiry about the completeness or accuracy of Office's copy of the above-identified papers, as the Technology Center's Customer Service Center will **not** be able to provide this service.

If applicant does not consider the Office's copy of such papers to be accurate, applicant must provide a copy of the above-identified papers (except for any U.S. or foreign patent documents submitted with the above-identified papers) with a statement that such copy is a complete and accurate copy of the originally submitted documents. If applicant provides such a copy of the above-identified papers and statement within **THREE MONTHS** of the mail date of this Office action, the Office will add the original mailroom date and use the copy provided by applicant as the permanent Office record of the above-identified papers in place of the copy made by the Office. Otherwise, the Office's copy will be used as the permanent Office record of the above-identified papers (*i.e.*, the Office will use the copy of the above-identified papers made by the Office for examination and all other purposes). This three-month period is not extendable.
